COMPUTERS IN EDUCATION AND LEARNING (ORIGINAL)

EVON LAVEA | RICHARD LEE

Proposal and direction of our project

For our proposal we have agreed to cover the topic surrounding technology within the education and learning sector.

<u>The 3 main areas to explore:</u>

- Computers in education and learning - Evon
- Online learning and COVID19 - Richard
- Long term impacts of online learning - Evon

Given the recent global events over the last few years we believe that it is important to look further into these topics – While there may not be a lot of historical data for us to compare against, we still believe we are able to dive into these areas and present some interesting findings more specifically, what are some of the trends we are noticing already within the primary to high-school school groups – have the proposed changes to the grading system been influenced by COVID19 and the lockdowns or has there been an underlying trend over the last 20 years to get to this stage
